

Fixed anti vibration foot mount

LAIROSI

Main features

Anti vibration elements for machine tool feet (SMAUT) are designed to isolate vibrations and noise, ensuring stability on paved surfaces. Made of durable natural rubber and galvanized steel, they offer excellent absorption capacity and durability. Ideal for machine tools, presses, and industrial equipment, they ensure a secure and adjustable support. Available in different hardnesses and sizes, they adapt to various needs, combining reliable performance with a practical and robust design.

These elements are innovative supports designed to reduce the vibrations and noise generated by machine tools during operation. Made from high-quality materials, these components effectively absorb oscillations, ensuring greater operational stability and protecting both the machines and the surfaces on which they are placed. Ideal for industrial environments, SMAUT elements are an essential solution for improving the precision and durability of equipment.

M	Load (daN)	Deflection (daN)
12MA	900	2,24
14MA	3,220	2,28
16MA	10,120	3,62
20MA	40,000	3,90
