

## **MARINFLEX rectangular anti vibration marine mounts**

### **Main features**

MARINFLEX rectangular anti vibration marine mounts are designed to isolate vibrations and noise in marine and industrial applications. Made from natural rubber with a specific compound and galvanised steel, they offer excellent resistance to static and dynamic loads. Ideal for marine engines, generators and pumps, they guarantee stability and durability. Available in different hardnesses, they adapt to various needs, ensuring reliable performance in a robust and compact design.

Thanks to their rectangular shape, these mounts offer a wide and stable base, ideal for ensuring effective isolation from vibrations. Made from advanced materials, rectangular MARINFLEX mounts protect equipment and surfaces, extending the service life of machinery in demanding environments.
